

Quick Start Guide

Rockbot Request Library

A library of pre-approved music for your customers to request

Allow your customers to create their music experience with Rockbot Request. Control the content that you allow customers to request at your business by setting up your Rockbot Request Library.

Getting Started

1. Select from Locked Library, Smart Library, and Custom Library for your library format.
2. Select additional artists and songs to add to your request library by using the search field.

Note: Songs are added to a queue for approval when a customer requests to play a song that is not a part of your current library. You can choose to approve or deny the song request from your library.
