

Rockbot TV Network Requirements

8.12.2024

Summary	2
Bandwidth Requirements	2
Firewall Allow List	2

Summary

To ensure a great experience utilizing Rockbot TV in your location, your network should meet the requirements listed in this document.

Bandwidth Requirements

Rockbot recommends the following minimum bandwidth for any player running Rockbot TV.

Channel Type	Minimum Bandwidth
Standard	5Mbps
Live	10Mbps

Standard channels are able to utilize the onboard storage on the Rockbot Player to minimize bandwidth utilization once the content is initially streamed. Live channels will utilize bandwidth continuously as the channel is active.

Firewall Allow List

In addition to the domains specified in the [Rockbot Network Requirements](#), Rockbot TV requires the following domains be accessible for content delivery if using the specified live channels. If your network employs a strict firewall, the appropriate domains must be allowed.

Allowed Domain	Channel
*.amagi.tv	SportsGrid, Accuweather Live
*.uplynk.com	ABC Live, Localish Live
*.lura.app, *.lura.live	Bloomberg Live
*.cdn77.org	FTF
